HPE Security Fortify product consulting

HPE Security Fortify Software offers a range of professional services to help your organization gain greater value from the HPE Security Fortify Suite. HPE Security Fortify Product Consulting Services include hands-on training, personalized consulting, and customized implementation.

Services are delivered by skilled personnel working with defined methodologies and best practices derived from hundreds of application security deployments for many of the world's leading enterprises and agencies.

Delivering deployment success

Deploying the HPE Security Fortify Suite into your organization is a critical step in reducing application risk. Typically, a successful deployment means that product capabilities are accessible and available with relevant personnel trained to correctly apply and administer them. Achieving these objectives may require integration with your existing processes or development of additional automation.

For some enterprises, this work may be difficult to perform because of the enterprise's lack of expertise, resources, or time.

HPE Security Fortify Product Consulting offers a number of solutions to help you achieve your security goals with HPE Security Fortify. HPE Security Fortify offers configuration, integration, and deployment services that provide hands-on technical expertise for ensuring availability and accessibility. Seamless integrations with key application lifecycle management processes help ensure that vulnerability analysis is performed automatically and results can be easily delivered to development teams for remediation.

If your organization seeks faster deployment of HPE Security Fortify, look to the HPE Security Fortify QuickStart Services. These services are designed to get your organization up and running with HPE Security Fortify in a short amount of time. HPE Security QuickStart Services are available for each of the HPE Security Fortify Analyzers.

Ensuring user success

To help your enterprises get the most from your security investments, HPE Security Fortify offers a suite of training and education courses tailored for security, engineering, and administrative roles. HPE Security Fortify also offers an industry-recognized certification course to help ensure that your HPE Security Fortify users are fluent across the range of product capabilities.

Advancing software security assurance (SSA) in the enterprise

For a broader range of application security services extending beyond HPE Security Fortify Software products, HPE Security Fortify offers SSA Consulting Services. HPE Security SSA Consulting Services help you assess the overall application security concerns for your organization and plan and implement a more secure application development and procurement process.

Implementing the HPE Security Fortify Suite

HPE Security Fortify Product Consulting Services include a range of consulting engagements aimed at helping organizations that are starting with HPE Security Fortify, deploying advanced or customized solutions, or needing product training or HPE Security Fortify certification.

HPE Security Fortify QuickStart Services

HPE Security Fortify QuickStart Services are designed to help small and midsize organizations get started with HPE Security Fortify. In these one- to two-week engagements, an HPE Security Fortify consultant helps install the product, provides mentoring, and assists your organization with the initial startup of the products. You can also use an HPE

Security QuickStart Service as part of a larger enterprise deployment. HPE Security QuickStart Services are offered for each of the HPE Security Fortify Modules: HPE Security Fortify Server, HPE Security Fortify SCA, HPE Security Fortify PTA, and HPE Security Fortify RTA.

Architecture—Implementation Design Consulting

An HPE Security Fortify consultant, with the assistance of your team, designs an enterprise architecture and deployment strategy for your HPE Security Fortify products. The consultant helps you identify resource requirements, recommends best-practice server deployment, and aids with scanning and analysis recommendations.

HPE Security Pilot Services

Your organization may desire a small pilot program before proceeding with an enterprise-wide rollout of HPE Security Fortify. This approach can be useful for testing a methodology or new process. In this program, a consultant deploys HPE Security Fortify into a few select environments within your organization. The lessons learned from the Pilot Service are then fed into the deployment process for the overall engagement.

The consultant also provides instructor-led training for the appropriate internal security teams and development teams. Walk-through of the audit process and hands-on practice with HPE Security Fortify SCA, HPE Security Fortify RTA, and HPE Security Fortify PTA occur with your internal teams.

Product Configuration and Deployment

This service is designed to help you implement the HPE Security Fortify Suite in your organization. You gain access to HPE Security Fortify consultants who will deploy the product suite within your application development environment.

Advanced Integration and Tuning Services

This portfolio service provides advanced integration and tuning capabilities to help you derive the most value from HPE Security Fortify. Common integrations include single sign-on, HPE Security Active Directory, non-standard bug-tracking systems, and static code control systems.

Education—Product Training and Certification

HPE Security Fortify provides a number of training courses to help you learn and configure the HPE Security Fortify Suite. HPE Security Fortify also offers industry recognized product certification courses.

About HPE Security

Hewlett Packard Enterprise is a leading provider of security and compliance solutions for the modern enterprise that wants to mitigate risk in their hybrid environment and defend against advanced threats. Based on market-leading products from HPE Security ArcSight, HPE Security Fortify, and HPE Security—Data Security, the HPE Security Intelligence Platform uniquely delivers the advanced correlation and analytics, application protection, and data security to protect today's hybrid IT infrastructure from sophisticated cyber threats.
