

HPE Business Value Dashboard

Business-color your IT data

Simple

Design custom templates using standard office tools

Colorful

Plug in your own graphics and quickly make changes

Flexible

Show status, metrics, RSS, and video streams from existing public and private data sources, including HPE Operations Bridge

Anywhere, anytime, any device

Access information in real time from popular browsers on any tablet, smartphone, or PC

Secure

Protect information with built-in robust security protocols (SSL and https)

While staying agile in this dynamic market forces business and IT teams to align and work together, IT continues to struggle with providing visibility. Companies need a more holistic view of both their information and public data to identify what actions should be taken. Improving this visibility enables business teams to make more strategic decisions.

Approximately 92 percent of enterprises have partial or no integration between IT metrics and business value.¹ With limited visibility into IT, business teams are making decisions that could ultimately result in application and service degradation, inefficient operations, and poor customer experiences.

Why you need a business value dashboard

IT is too often viewed as a cost center and not a strategic business partner. Failure to communicate IT contributions in business terms inhibits investments in initiatives that could add business value. The HPE Business Value Dashboard (BVD) can help convey value to business leaders and change the perception of IT as merely an operational contributor to a more strategic partner.

Broaden your view of IT

HPE BVD helps you align operations with the business. Use HPE BVD to create custom, flexible IT dashboards that can

be accessed anywhere, anytime from any device. Through custom integrations and graphing, you can find and review relevant information that will aid decision-making and improve business outcomes.

Bridge the information gap

HPE BVD and its IT operations dashboard works with a variety of data sources including HPE Operations Bridge, which provides a single view into your IT operations. Access the rich information set directly in HPE BVD without rebuilding the integrations for the dashboard separately. Additionally, you can bring in data from other sources to paint a more complete picture.

Give business meaning to your IT data

Completely flexible and easy-to-use, HPE BVD lets you visualize the data you need. Incorporate your own graphics, add color to identify status, and receive real-time updates—so you always understand the value driven by IT.

Solution brief

The HPE BVD can be completely customized to meet the needs of your organization.

Gartner reports that 88 percent of I&O leaders plan to embark on their BVD journey within the next 24 months.²

“As we transform group operations to be service driven, we magnify the need to communicate how IT supports each revenue stream. HPE Software has empowered us to do exactly that tailored to our needs with the new Operations Bridge Business Value Dashboard.”

– Global Solution Architect, Large Telecommunications Firm

Use your existing data and then some

With the HPE Operations Bridge Ultimate edition, you gain access to the industry-lauded IT availability and performance management system that integrates with more than 100 technologies and management tools—many of which you likely already have. It bridges multiple data sources, providing business and IT metrics, and displays status in your IT dashboards.

It bridges multiple data sources, providing business and IT metrics and displaying status in your IT operations dashboards. It also includes Big Data-based advanced analytics that automate pattern matching in log and other data sources. Additionally, you can integrate any data stream, RSS feed, or streaming video, collected from anywhere.

Build and use your dashboard

Start with any of the templates HPE provides, and customize it in minutes using popular standard office tools like Microsoft® Visio. Connect to HPE Operations Bridge or other data sources. Then visualize using standard browsers from popular tablets, smartphones, or your PC.

Benefits of the dashboard

With HPE BVD, you now have an IT operations-focused way to describe IT contributions and display key metrics and status alongside non-IT data. As shown in the examples above, customers are already seeing the benefits of HPE BVD by building display mashups and IT dashboards that combine geographical and IT data. For example, users can develop a bank branch or shop floor format, and then add temperature, flow, and transaction throughput information, as well as those all-important IT metrics and status.

Get started today

HPE BVD is hosted on a public cloud platform, which means you can access the service anywhere.

Out-of-the-box dashboard templates enable you to get started right away, and customization only takes a few hours. If you're ready to quickly communicate how IT supports each revenue stream, try the free beta program of HPE BVD today.
