

Building a strong foundation for IT service management

The IT landscape is constantly changing. So how can you maintain control?

The challenges

- Blurred visibility
- Inaccurate service views
- No impact analysis
- Inadequate asset management

The risks

- Flawed change decisions
- IT service failures
- Performance degradation
- Software compliance violations

To avoid these risks, you need a robust configuration management system (CMS). It's the foundation for IT service management.

Six requirements for your configuration management database (CMDB) solution

Hewlett Packard Enterprise brings it all together

HPE CMS collects, stores, manages, updates, and presents data about software and infrastructure services configuration.

— What's in HPE CMS? —

HPE Universal Discovery (UD)

- Application dependency mapping
- Inventory
- Real-time discovery
- Hybrid agent and agent-less discovery
- Cloud and on-premises discovery

HPE Universal Configuration Management Database (UCMDB)

- Automated service modeling
- Configuration management system
- Impact analysis
- Simplified visualization via web browser

Realizing the benefits of HPE CMS

Cutting costs

\$2M

Projected three-year savings at Exelon using HPE Software to track the configuration of 10,000 servers.

Assessing risks

"We now have a clear picture of the impact a change might have across the business, or how a particular business service may be affected."

— Stephan Dietz, process owner service asset and configuration management, Continental AG

[Read the case study](#)

Simulating changes

"We now simulate every change that affects a process reflected in the UCMDB, which means we can prevent many incidents even before they occur."

— Edmund Koch, head of IT Services, Audi AG
