

# HPE Sizer for Microsoft Exchange Server 2016

## Solution Sizers Overview

Hewlett Packard Enterprise Solution Sizers are automated tools that assist with recommending a solution environment. Sizers are downloaded and run on the user's personal computer. Updates with the latest information on Hewlett Packard Enterprise hardware and solution software are available automatically when the user is connected to the Internet and may optionally be installed by the user.

## Features of the HPE Sizer for Microsoft Exchange Server 2016

Microsoft® Exchange Server 2016 is the latest release of a complex application that requires thorough knowledge of deployment strategies, interdependencies, and server and storage performance goals. HPE has developed the HPE Sizer for Microsoft Exchange to assist customers with proper server and storage sizing and configuration for their Exchange deployments. The algorithms developed and implemented in this Sizer are based upon extensive knowledge from both Microsoft and HPE of both Exchange and the hardware required to run it: CPU, memory, and storage subsystems. This Sizer is designed to allow very quick 'what if' modeling of various configurations and design choices. As part of our close alignment with Microsoft, the Sizer also allows the user to import the Microsoft Role Planning Calculator, which can be used for initial sizing and planning, before selecting the hardware needed to run Exchange.

The HPE Sizer for Microsoft Exchange Server 2016 provides support for multiple site deployments, varied client profiles, and Database Availability Group (DAG) high availability options. HPE Server choices include tower, rack mounted, HPE BladeSystem server platforms, and the new HPE Apollo Systems. HPE storage options include server-based storage, direct attached (DAS), shared DAS or storage area network (SAN) solutions. Based on your input, the Sizer provides a suggested bill of materials along with a deployment overview of the Exchange server roles and detailed storage configurations, including RAID, disk volumes and database copy layout.

Please see the "What's new" link on the home page of the Sizer (when installed on your system) for the most recent information.
