

## Product End-of-Life Disassembly Instructions

**Product Category: Servers**

**Marketing Name / Model**  
[List multiple models if applicable.]

HPE ProLiant ML110 Gen 10

**Purpose:** The document is intended for use by end-of-life recyclers or treatment facilities. It provides the basic instructions for the disassembly of HPE products to remove components and materials requiring selective treatment, as defined by EU directive 2002/96/EC, Waste Electrical and Electronic Equipment (WEEE).

### 1.0 Items Requiring Selective Treatment

1.1 Items listed below are classified as requiring selective treatment.

1.2 Enter the quantity of items contained within the product which require selective treatment in the right column, as applicable.

Item Description	Notes	Quantity of items included in product
Printed Circuit Boards (PCB) or Printed Circuit Assemblies (PCA)	With a surface greater than 10 sq cm	2
Batteries	All types including standard alkaline and lithium coin or button style batteries	2
Mercury-containing components	For example, mercury in lamps, display backlights, scanner lamps, switches, batteries	0
Liquid Crystal Displays (LCD) with a surface greater than 100 sq cm	Includes background illuminated displays with gas discharge lamps	0
Cathode Ray Tubes (CRT)		0
Capacitors / condensers (Containing PCB/PCT)		0
Electrolytic Capacitors / Condensers measuring greater than 2.5 cm in diameter or height	Depending on Power Supply Model	6
External electrical cables and cords		0
Gas Discharge Lamps		0
Plastics containing Brominated Flame Retardants weighing > 25 grams (not including PCBs or PCAs already listed as a separate item above)		0
Components and parts containing toner and ink, including liquids, semi-liquids (gel/paste) and toner	Include the cartridges, print heads, tubes, vent chambers, and service stations.	0
Components and waste containing asbestos		0
Components, parts and materials containing refractory ceramic fibers		0

Item Description	Notes	Quantity of items included in product
Components, parts and materials containing radioactive substances		0

### 2.0 Tools Required

List the type and size of the tools that would typically be used to disassemble the product to a point where components and materials requiring selective treatment can be removed.

Tool Description	Tool Size (if applicable)
Torx Driver	T-30
Philps screwdriver	

### 3.0 Product Disassembly Process

3.1 List the basic steps that should typically be followed to remove components and materials requiring selective treatment:

1. System Board Battery - Remove the top cover and locate the battery on the system board.
2. Capacitors in ATX power supply=> 2.5 cm () - Remove the power supply from the system with a T-15 torx driver. With a #2 Philips screw driver remove the screws securing the top cover then locate the capacitors and pry from the PCB with a flat head screw driver or Long Nose Plier () and dispose of properly.
- 3.
- 4.
- 5.
- 6.

3.2 Optional Graphic. If the disassembly process is complex, insert a graphic illustration below to identify the items contained in the product that require selective treatment (with descriptions and arrows identifying locations).

## ML110 G10 System exploding drawing

## Remove System Coin battery

1. Remove the coin battery from the battery holder

## Remove Megacell battery

MF877-00  
Template Revision A

Page 3

HPE instructions for this template are available at [MF877-01](https://www.hpe.com/learn/MF877-01)

1. Unplug Megacell battery connector from motherboard
2. Pull out the Megacell battery module from Megacell holder

## POWER CAPACITOR – 350W ATX PSU

Heat the solder of Electrolytic Capacitors greater than 2.5cm in diameter or height and remove it

## POWER CAPACITOR – 550W ATX PSU

Heat the solder of Electrolytic Capacitors greater than 2.5cm in diameter or height and remove it

## POWER CAPACITOR – PDB

Heat the solder of Electrolytic Capacitors greater than 2.5cm in diameter or height and remove it
