HPE Education Services for Security

HPE offers a comprehensive vendor-agnostic industry security certification and training curriculum that teaches organizations how to build and implement organizational information security based on best practices and cyber security frameworks.

We cover all dimensions of transforming people, process and technology in your security transformation journey. We also offer Management of Change services alongside security awareness education for the workforce. This helps to accelerate the benefits of security training, and reduce the disruption of transitioning to new security processes and tools

Browsing Safely	Data Security
	
Email, Phishing, and Messaging	Hacked

HPE Information Security

Most organizations invest in security technology to protect their information, putting in place solutions such as firewalls, encryption, or intrusion detection system (IDS) sensors. However, many of these organizations fail to address the human element. People, just like computers, store, process and transfer highly valuable information. Yet people remain highly insecure, since so little has been done to educate them. As a result, cyber attackers are actively targeting the human element. Until you address the human issue, technology alone cannot secure your organization. HPE helps you address these issues with high-impact Security Awareness training. The awareness training program is broken down into short, individual computer-based training (CBT) modules. Each training module focuses on a specific security topic, demonstrates how it affects the user, and then provides solutions. The Gamified modules provide an interactive hands-on approach to engagement in the learning process. More info [here](#).

Receive SUAT with Management of Change for Best Effectiveness

Our SUAT is offered with Management of Change (MoC) services, to help ensure that your people are prepared for training, understand why it is important to your business, and that new behaviors are re-enforced and adopted effectively. Learn more [here](#).

IT Service Management

Customers and business units are constantly looking to their IT service provider to help them achieve their business outcomes. How do we make sure that our IT service provision is making the right contribution? ITIL® is an industry wide framework for developing, managing and supporting IT services based on industry best practices that can help. HPE Education Services offers training, mentoring and consulting solutions that equip IT professionals and management with knowledge and skills to optimize your IT Environment to support your business with greater levels of efficiency and quality.

ITSM education solutions from HPE will:

- Educate staff and manage ITIL certifications
- Provide consulting services to help define & improve ITSM competencies
- Determine key capabilities for staff
- Support awareness; management “buy-in”
- Create a common language and understanding
- Plan for organizational changes

Enterprise Efficiencies and Improvements with HPE Service Management Organizations benchmark themselves against peers and seek to close gaps in capabilities. This enables them to become more competitive by improving their ability to deliver quality services that meet the needs of their customers at a price their customers can afford:

- ITIL for Executives
- ITIL Service Management Awareness
- HPE Race to Results Service Management Simulation
- ITSM in the Cloud
- IT4IT™

HPE Education Services also has offerings geared towards enterprise efficiencies and improvements for IT organizations as a whole rather than on individual employees:

- Applied Service Management Workshops
- ITSM Assessments
- ITSM Mentoring
- Service Management Professional Program
- Customized Service Management Packages

If you are interested in obtaining ITSM training, mentoring or consulting solutions, please contact your local HPE Education Services office [here](#)
