

Integration and Performance Services

Sanitize and Retire

HPE Pointnext offers a range of services to help safely decommission old IT, sanitize data and provide guidance for disposal options.

Keep your data safe. When your organization is retiring systems, upgrading storage and servers, returning leased equipment, or redeploying data storage devices, it is critical that you take steps to protect the company information they contain. Simply deleting the files on the hard drive is not enough to make the data permanently inaccessible. HPE Pointnext provides the skilled resources and tools to help your organization address this significant security risk.

If your organization is working faster and smarter than ever before to stay relevant in today's ever-changing market, IT needs to move at business pace so full advantage can be gained. With these specialized services from HPE Pointnext, you can keep your IT staff focused on IT innovation and let us manage the end-of-life process for your products and solutions. You can deploy our technical resources to help you with your projects to supplement your own IT staff.

Data Sanitization

It is crucial for every business to maintain data protection and, in some cases, compliance with regulations. Using some of the industry's most stringent data-removal protocols, HPE offers services to sanitize storage devices prior to repurposing or disposal.

Using specialized software techniques, an HPE service specialist will help ensure that data cannot be reconstructed or retrieved from hard disk media in your server and storage devices. These services offer you a smart alternative or augmentation to physical hardware destruction by executing procedures to remove data from disk media, helping you safely decommission old IT and sanitize data. We also provide guidance on disposal options.

We're with you every step of the way

Boost your IT performance today, modernize for the future, and maximize your return on investment over your entire IT lifecycle.

[See the brochure for details](#)

Data Destruction

If you are subject to the most stringent data privacy concerns, HPE Pointnext can provide Data Destruction services as part of an Asset Recovery solution. With the delivery of an onsite shredding device that allows your data bearing storage drives to be securely destroyed.

Our data sanitization and data destruction services can help you to avoid financial penalties, damage to your brand and your business performance that can result from unauthorized access to your data.

HPE Asset Recovery

Take the worry and pain out of disposing of your redundant IT with the HPE Asset Recovery service. Our team will work with you to discuss most suitable options, whether that's to destroy, resell, or recycle. The HPE Asset Recovery service manages the process from start to finish, from the initial sanitization of any data on the storage device/s, decommission of equipment, packaging ready for shipment, shipment back to the HPE Asset Recovery center for onward, disposal or repurposing.
