Mission-critical Roadmap update and commitment for HPE Integrity NonStop Customers

For over four decades, customers have trusted HPE's mission-critical solutions to support their most complex and demanding workloads. Ensuring that you can count on your computing environment isn't just our business, it is our passion. HPE remains committed to protecting existing investments in your infrastructure as well as delivering next generation technologies. This remains our compelling strategy for delivering mission-critical capabilities to our Enterprise customers ensuring you can choose the right compute for the right workload at the right economics to meet your business needs every time.

For a core set of vital workloads and applications, NonStop is and will continue to be the preferred choice for customers whose businesses cannot stop or be offline for any single point of failure. We will continue to ensure that customers are able to run their key workloads on NonStop platforms today and in the future.

We are excited about several solutions that we offer to customers today and new initiatives on the horizon. In addition to our NonStop Intel Itanium servers based on Poulson, we have also delivered a new platform, NonStop X, based on Intel x86 technology. NonStop X delivers twice the performance of NonStop i platforms, while still scaling and offering the fault tolerance and security that has always marked NonStop as unique. Customers can expect that the next generation of NonStop solutions will move into cloud computing with a new virtualized NonStop offering that brings greater configuration capabilities with the same uptime protection that customers count on. NonStop is also investing heavily in our SQL/MX Database Services solutions that focus on delivering unique value add to our customers' future digital core.

We understand that your business is changing continuously, and we are committed to help you meet the challenges you

face as a result of the new changing world. We will continue to deliver a portfolio of robust mission-critical solutions to run your most vital applications. We are committed to your success, and look forward to working with you to address your mission-critical computing needs now and in the future. .

Regards,

Randy Meyer
