

“We were particularly impressed by the seamless interoperability between HPE Synergy and HPE 3PAR arrays when compared with other less open, more proprietary products. Also, we greatly value the personal contacts we have developed with the HPE team over time.”

– Sacha Rosenthal, Founder, XEFI

IT services provider XEFI offers hosting solutions for the SMB market. With more than 60 branches in France, the group provides maintenance and managed services, security and internet connections, software services, printing, security, backup, and disaster recovery.

Challenge: Implement simple, scalable, and sustainable cloud architecture

To the ever-increasing demands of the SMB market, was adding increased internal and external pressures. In addition, XEFI was keen to keep up with the fast pace of new and emerging technologies to support its ambitious growth plans.

Solution: Kickstart IT transformation with HPE Synergy

To meet these challenges, the company decided to develop a new IT strategy around cloud computing and to upgrade its data center. To make these plans a reality, it needed to replace its present hardware for its cloud offering and chose an HPE Synergy 480 Gen10 platform with HPE Synergy 480 Gen10 compute modules and connected to HPE 3PAR StoreServ Storage.

Results: Get future-proofed environment

With increased compute power and high server density, XEFI gets uncompromising processing capacity, unlike conventional blade architectures. “We already host more than 1,800 clients and we believe that we can easily accommodate twice that number as it stands at the moment,” says Sacha Rosenthal. And the power and flexibility of HPE Synergy has also supported some demanding special cloud projects.
