

### Overview

## Aruba Network Optimizer SDN Application Series

### Models

Aruba Network Optimizer Application 100 Concurrent Sessions E-LTU

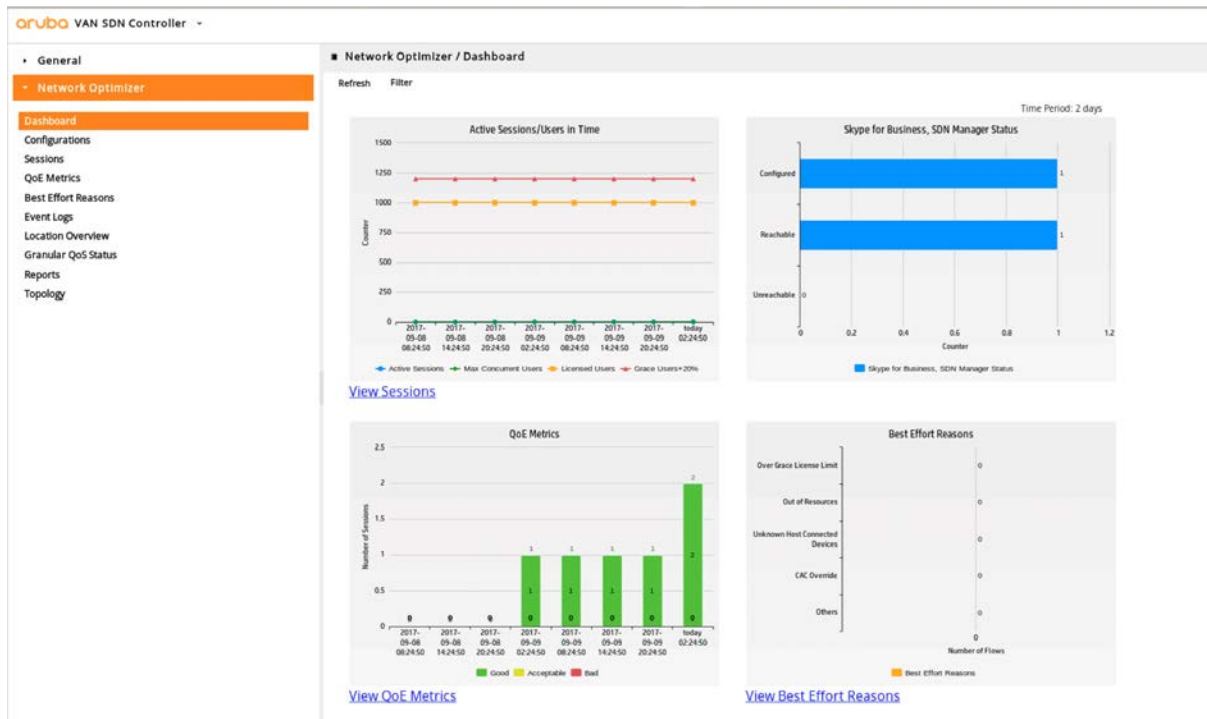

J9985AAE

### Key features

- Delivers an enhanced experience for unified communication and collaboration users
- Provides dynamic prioritization
- Simplifies policy deployment
- Delivers an unprecedented level of application visibility and policy automation

### Product overview

The Aruba Network Optimizer Software Defined Networking (SDN) Application for Microsoft Skype for Business enables automated provisioning of network policy and quality of service to provide an enhanced user experience. The Network Optimizer Application dynamically provisions the end-to-end network path and Quality of Service (QoS) policy via the Aruba Virtual Application Networks (VAN) SDN Controller, reducing the need for manual, device-by-device configuration via the CLI, which greatly simplifies policy deployment and reduces the likelihood of human errors.

Network Optimizer Dashboard

### Features and Benefits

#### Application dashboard

Provides a graphical overview of active sessions and peak call time, Skype for Business server connectivity status, quality of experience metrics for completed calls, and poor call quality analysis.

## Overview

### Microsoft Skype for Business front end server view

Displays Skype for Business front end server operational status in SDN domain.

### QoE graph

Displays the number of completed sessions at specific QoE levels over time.

### Plug-and-play UC

Delivers enterprise grade voice and video call quality.

### QoS trend analysis

Provides 15 days of call records for all Skype for Business calls searchable by active/completed, QoE, call media type, User ID, and time.

### Trusted QoS

Provides protection against malicious or accidental QoS Denial of Service (DoS) attacks.

### Auto QoS

Alleviates labor intense device configuration, which is error prone and device dependent.

### Optional anonymous call records

Prevents user identity from being recorded or displayed in databases, logs, and call records; only IP addresses are retained.

### Mixed vendor network support

Seamlessly passes through legacy network nodes and successfully reaches SDN capable devices where call quality is honored.

### QoS attributes for non SDN hosts

Supported through per flow QoS markings applied within SDN domain.

### Voice VLAN calls

Included in the QoE metrics to provide visibility without consuming client licenses.

## Technical Specifications

<b>Aruba Network Optimizer Application 100 Concurrent Sessions E-LTU (J9985AAE)</b>	<b>Platform required</b>	Server: Aruba VAN SDN Controller software
	<b>Minimum system requirements</b>	Server: 3.0 GHz Intel® Xeon® or Intel® Core™2 Quad processor or equivalent
	<b>Recommended software</b>	Server: Ubuntu 14.04 LTS 64-bit
	<b>Services</b>	Refer to the Hewlett Packard Enterprise website at <a href="http://www.hpe.com/networking/services">http://www.hpe.com/networking/services</a> for details on the service-level descriptions and product numbers. For details about services and response times in your area, please contact your local Hewlett Packard Enterprise sales office.

## Summary of Changes

Date	Version History	Action	Description of Change
10-Mar-2017	From Version 3 to 4	Changed	Document name and content updated with Aruba information
27-May-2016	From Version 2 to 3	Changed	Product description updated.
11-May-2015	From Version 1 to 2	Changed	Key features, Product overview and Technical Specifications updated
