SCO UnixWare 2.1

Overview

Delivered by SCO, the world's leading UNIX provider, the UnixWare 2.1 Application Server delivers enterprise-class computing capabilities with built-in internet services for today's server platforms. Designed for performance, reliability and Internet optimization, SCO UnixWare 2.1 is an exceptional platform for running day-to-day business functions. SCO UnixWare is equally suited for use as a highly reliable platform for running Departmental Databases, Line of Business Applications, Internet Commerce servers, Departmental Intranet Servers and Internet Web Servers.

UnixWare 7, the next generation UNIX operating system from SCO, is now available. UnixWare 7 builds on the strengths of UnixWare 2.1 and integrates several new exciting technologies. Compaq and SCO encourage UnixWare 2.1 customers to begin their migration to UnixWare 7. For more information on UnixWare 7, please visit www.sco.com.

SCO UnixWare 2.1 can be purchased from SCO Authorized Resellers (visit www.sco.com for a complete listing).

COMPAQ SUPPORT FOR SCO UNIXWARE 2.1

Compaq and SCO engineers have worked closely together to ensure that SCO UNIX systems run optimally on Compaq hardware and to deliver the utilities and tools necessary to lower the customer's total cost of ownership.

Hardware Certification

Compaq certifies a full range of servers and options under SCO UnixWare 2.1. For a complete product certification listing, visit the SCO website at www.sco.com/chwp/owa/hch_search_form.

Compaq SmartStart

Compaq SmartStart is an integration tool that configures Compaq hardware and prepares it for software installation. All of the latest support software required to optimally run SCO UnixWare 2.1 on Compaq servers and options is available on the SmartStart and Support Software CD, which is delivered with every Compaq server.

Compaq Insight Manager

Compaq Insight Manager is also delivered with every server. Compaq Insight Manager provides comprehensive monitoring, either on the network or remotely, ensuring smooth running of SCO UnixWare-based servers and options. The Insight Manager console is a 32-bit Windows application that can be run on Windows NT 3.51, NT 4.0 or Windows 95/98 machines. Compaq Insight Management Agents collect information that can be viewed by the console or any other SNMP management application. Agents are included free-of-charge with Compaq servers and can be automatically installed by SmartStart.

Compaq Recovery Server Option

The Compaq Recovery Server Option increases system availability for UnixWare 2.1 environments by allowing one Compaq ProLiant or ProSignia server to act as a standby for another similarly configured ProLiant or ProSignia server. In the Standby Recovery Server configuration, two Compaq servers are attached to a common set of ProLiant Storage Systems that contain a single copy of the operating system, application and data. If the primary server fails, each ProLiant Storage System automatically switches from the primary to the recovery server. The recovery server then boots and the system is back online in minutes without administrator intervention.

The Compaq Standby Recovery Server is a server configuration provided by the Compaq Recovery Server Option. For more information on the Standby Recovery Server and Recovery Server Option, visit www.compaq.com.

Service and Support

SCO UnixWare 2.1 products are fully supported by Compaq's Technical Support Organization. Compaq personnel are trained to handle any SCO issues related to Compaq hardware and can directly escalate issues to SCO if necessary.
